- Supply & Installation of steel building and related work.
- Overall responsibility and interface lionising
- Legal Compliances

## WHAT IS PRE -ENGINEERED BUILDING?

Pre Engineered buildings (PEB) are the state of art steel solution for developing an efficient and cost effective infrastructure. They are pre designed, pre manufactured at factory and supplied as a fully finished product along with steel structure, roofing, cladding & building accessories. This concept gives a very fast construction and an excellent accuracy in design and manufacturing and world class building product with virtually zero wastage. We can use this technique for any type of application for building construction what we can imagine in concrete construction with more flexibility compared to concrete. PEB has very wide scope in terms of flexibility to use & provision to offer any type of shape and capacity.

## PROTON STEEL PRE-ENGINEERED BUILDING SYSTEM

Our customers choose pre-engineered steel buildings (PEB) over other types of construction for the following reasons:

**Quick** construction time and capacity for design flexibility, allowing our engineers to create a unique, and attractive appearance that fits the distinctive business image of each customer.

**Strength** of our structures which are designed and built to withstand severe weather conditions (wind, snow, rain and earthquakes).

**Proton** Steel buildings accommodate a wide variety of occupants, from factories and showrooms to shopping malls and hypermarkets. Be sure to browse our photo gallery of clients both in this brochure and at our Website.

**Flexibility** of large, clear spans allow our customers to house almost any type of business comfortably and efficiently, as well as to expand and change their layout whenever they desire.

**Value** for money as our pre-engineered steel structures require a lower initial investment, lower maintenance cost once completed, and are environmentally friendly as all materials can be recycled.

FLEXIBILITY

STRENGTH

VALUE

Here are just some of the ways Proton Steel Pre-Engineered Buildings are currently being used

## WHY PROTON STEEL?

### Early & Fast

Occupation of Premises  
Early Return on Investment  
Higher Profitability

### Consistent Quality

Proven Technology  
Reliable Solution

### Lower Life-Cycle Cost

Lower Maintenance  
Cost Greater Life- Cycle  
Cost Savings

### Advanced Technology

Latest technology utilised  
Global Knowledge applied

### High Productivity

Leak - Proof Roof System

### Complete Solution

Single Source Responsibility  
Eco Friendly
