

# Empower your agencies to better serve your constituents and workforce.

**Wireless business internet helps keep you connected wherever your work takes you.**

Enhance your organization with the speed and reliability of our advanced network solutions.

Agencies require more than just dependable connectivity; they need connectivity that paves the way for next-generation innovation. Verizon's wireless business internet enables the use of revolutionary 5G applications through its exceptional performance and reliability.

Verizon understands that the challenges you face include critical shortages in staffing, the need for extensive training and the ever-looming specter of compliance with regulations. Our expertise lies in helping you overcome these barriers, enabling your agencies to harness the power of innovation effectively.

## **Keep your organization adaptive and ready for tomorrow with our advanced network solutions.**

Amid the demand for agile and reliable networks, Verizon business internet stands as a pillar of support. By helping you modernize your network architecture, we can help pave the way for enhanced scalability, reliability and adaptability to emerging technologies.

Our wireless business internet is designed to help operations scale to meet a variety of needs across various locations and grow as your organization's needs grow. With our high-speed 5G and 4G LTE Business Internet,<sup>1</sup> your agencies can count on built-in network security controls to help defend against cybercriminals.

## **Find out how our business internet can help.**

### **Remote sites**

For remote staff, reliable and secure connectivity is essential to carrying out tasks effectively. Whether they're accessing resources, communicating with constituents or handling sensitive data, a stable connection is crucial. We can help you deliver secure connectivity for temporary work locations or even areas with limited infrastructure. Our virtual private networks (VPNs) and secure remote desktop solutions can help maintain productivity even in challenging circumstances.

### **Failover/backup network**

Failover solutions provide a safety net, ensuring that even if the primary connection fails, operations can continue seamlessly. We can help your agency stay operational and connected by providing a secondary backup connection with the help of our powerful 5G network. The increased bandwidth possibilities of our 5G network can even make it work as your primary connection. Depending on the bandwidth and data needs of your agency, you could also use our 4G LTE network as a backup connectivity option.

### **Digital transformation**

As technology evolves, traditional infrastructure like plain old telephone service (POTS) is becoming obsolete. Give your agencies the modern, digital solutions they need to help bolster security and enhance connectivity so they can operate more efficiently and effectively. This could include migrating from analog phone lines to Voice over Internet Protocol (VoIP) systems or adopting cloud-based communication platforms. Verizon offers a range of solutions to help facilitate this transition, providing your teams with simple, reliable and secure alternatives to traditional communication methods. These solutions not only improve communications, but they can also help enable greater flexibility and scalability.

# Verizon built and now manages America's most reliable 5G network.<sup>2</sup>

## Why Verizon?

When it comes to your technology transformation, Verizon is the experienced partner to lead the way across this journey.

### Secure network connectivity

Get the expertise and support to design and implement the right connectivity solutions for your needs. Whether it's highly secure private networks for mission-critical activities or broader connectivity to help improve how you deliver services to your constituents, we can empower your transformation by leveraging our experience in public and private networks and with multi-access edge computing (MEC).

### Managed and professional services

Our experts can help you better understand your options, including technical implementation and process management, so you can arrive at custom plans that work well for your agency. Our managed technical services can help augment your IT resources, potentially unlocking new capabilities previously unavailable or allowing you to reallocate your essential IT personnel to other mission-critical tasks.

### An unwavering commitment to the Public Sector

Get secure, purpose-built Public Sector solutions, backed by decades of experience and public safety technology. We're here to help you meet the needs of your community, no matter who you serve.

### Award-winning nationwide wireless business internet

Whether your agency operates one location or many, large or small, we have fast wireless internet solutions to fit your organization – all on the network you can rely on.

### Verizon is the #1 network choice in public safety.<sup>3</sup>

### Verizon was awarded the "Best Practices Product Leadership Award" in the U.S. fixed wireless access market by Frost & Sullivan.<sup>4</sup>
