UZ-Min Zeolite Clinoptilolite has many pores inside, uniform tubular channels, and an internal surface with large pores which has unique adsorption, screening, exchange of anion and cation, and catalytic performance, and can adsorb a large number of toxic substances (such as NH₃, NH₄⁺, CO₂, H₂S, etc.). It can be used as a kind of animal feed additive and toxic adhesive for livestock and poultry, which can be used as water filter agent in aquaculture fields.
